INTERNSHIP

COMPLETION PRESENTATION

E-GOVERNANCE & DIGITAL SERVICES

Student name - Komal Kumari
Roll no. – 25SCS1003001678
Degree – B tech Computer Science and Engineering (Core)
Academic Batch – 2026-27
University – IILM, Graeter Noida ,Uttar Pradesh
Semester – 3rd

A citizen-centred digital service journey

PROJECT JOURNEY

01	PLAN	Requirements
02	DESIGN	Responsive UI
03	TEST	QA strategy
04	AUDIT	Security & performance
05	LEARN	Outcomes

Candidate's Declaration

DECLARATION

I, Komal Kumari, declare that the internship work presented in this presentation was completed as part of my internship responsibilities in the domain of E-Governance & Digital Services. The presentation is based on the supplied internship deliverables and supporting project documentation.

Komal Kumari

Junior Web Developer • August 2026

Acknowledgement

✓ I express my sincere gratitude to the internship organisation and mentors for providing an opportunity to work on E-Governance & Digital Services. I am thankful for the guidance, feedback and learning opportunities that supported my work across requirements analysis, responsive interface design, QA strategy and technical audit thinking.

Komal Kumari

Junior Web Developer

Certificate of Experience

Official internship completion evidence

CERTIFICATE OF EXPERIENCE

To Whomsoever It May Concern

This is to certify that **Komal Kumari** successfully completed an internship with **YuvaIntern** in the role of **Junior Web Developer - E-Governance & Digital Services**.

Throughout the tenure of this internship, Komal demonstrated consistent dedication, professionalism, and a strong willingness to learn and grow. Their contributions were valued by the entire team at YuvaIntern, and they conducted themselves with integrity and commitment throughout the program.

We commend Komal's hard work and wish them continued success in all future endeavors.

Certificate No: YI/2026/183479/406614
Date of Issue: August 28, 2026

FOR AND ON BEHALF OF YUVAINTERN

CERTIFIED

Kounal Gupta
Founder, YuvaIntern.com

Henry Harvin America Head Office
Henry Harvin Inc

ROLE

Junior Web Developer

DOMAIN

E-Governance & Digital Services

WEEK 1

Planning & Requirements Analysis

WEEK 2

Responsive Web Prototype

WEEK 3

QA & Testing Strategy

Overall focus

A citizen-centred digital service journey supported by usability, responsive design, quality assurance, accessibility, security and performance evaluation.

5

Project Overview

Digital Citizen Service Portal

A web-based concept for accessing public services online, including certificates, grievances, tax payments, tracking and notifications.

Discover

Find a relevant public service.

Understand

Review eligibility, documents, fees and time.

Apply

Complete forms and upload documents.

Confirm

Receive acknowledgement and reference number.

Track

Monitor application status and next steps.

Problem Statement

Public digital services must work for people — not only for the system behind them.

USABILITY

Clear path from finding a service to tracking a request.

ACCESSIBILITY

Support different devices, interaction methods and accessibility needs.

SECURITY

Protect identity, authorization, inputs, sessions and records.

PERFORMANCE

Slow or unreliable services can become barriers to access.

Goal: create a service journey that is understandable, responsive, inclusive, secure and dependable.

Objectives & Scope

OBJECTIVES

1. Design a responsive information architecture.
2. Improve service discovery, application and tracking.
3. Use reusable UI patterns.
4. Embed accessibility and error recovery.
5. Define structured QA coverage.
6. Evaluate performance, accessibility and security using recognised benchmarks.

SCOPE

Service experience: landing page, search, service details, application, confirmation and tracking.

Quality assurance: testing levels, lifecycle, scenarios, defects, quality gates and release thinking.

Audit readiness: performance, accessibility, security, privacy, reliability, monitoring and remediation planning.

Planning & Requirements Analysis

RESEARCH & USERS

Reference platforms: Digital India, UMANG and DigiLocker.

Stakeholders: citizens, government officials, system administrators, IT team and department heads.

Personas: young professional, rural citizen and government officer.

REQUIREMENTS

Functional: registration, login, service application, document upload, tracking, admin approval/rejection and reports.

Non-functional: security, performance (<3s), scalability, reliability, availability, accessibility and maintainability.

USER JOURNEY

Login → Select Service → Fill Form → Upload Documents → Submit → Verification → Approval/Rejection → Notification

The analysis also identified risks such as data breach, server failure, low adoption, budget overrun and changing requirements.

Conceptual System Flow

CITIZEN Dashboard → **SERVICE** Search / Select → **FORM** Fill / Validate → **DOCUMENTS** Upload → **SUBMIT** Application → **OFFICER** Review → **OUTCOME** Approved / Rejected

Conceptual technology stack from the Week 1 plan

- HTML • CSS • JavaScript • Bootstrap
- Node.js • Express.js • MySQL • JWT
- GitHub • AWS / Azure

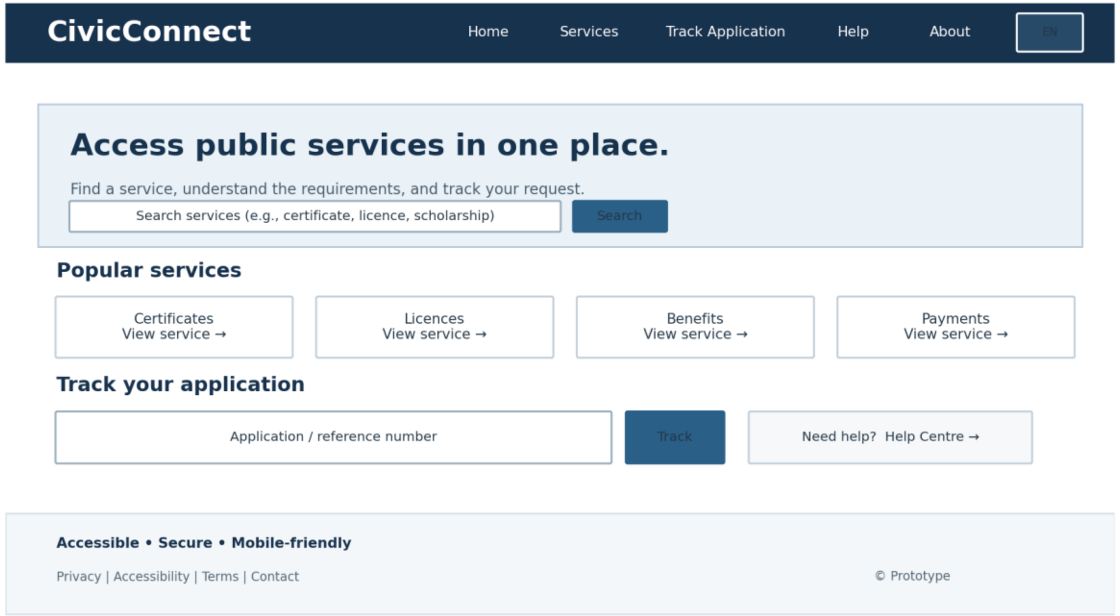
Note: the supplied documents describe this as a conceptual project and do not establish a production implementation.

CivicConnect — Responsive Service Portal

A task-first digital public-service experience

The concept helps users discover a service, understand requirements, complete an application, receive confirmation and track progress.

High-Fidelity Desktop Home Page



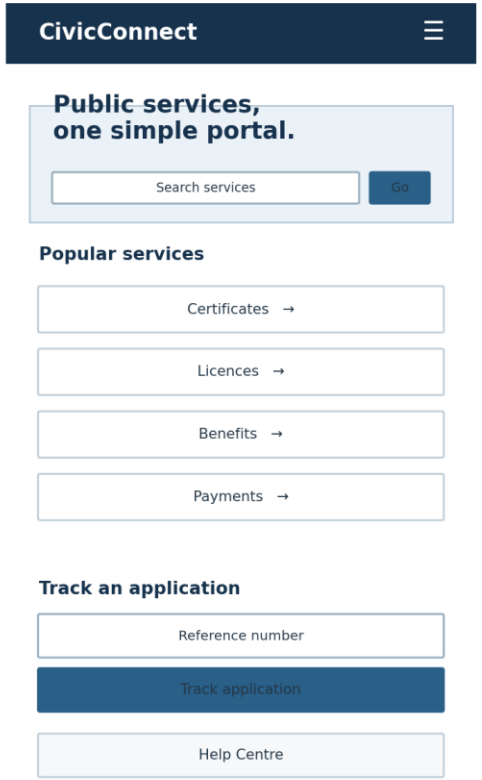
Home / Services / Track Application / Help

Search-first discovery • service cards • application tracking • support access

The supplied Week 2 document describes CivicConnect as a conceptual, platform-agnostic prototype rather than an existing government website.

Responsive Interface & User Experience

Mobile Responsive View



DESKTOP

Multi-column layouts where comparison and scanning benefit.

TABLET

Reduced columns, compact navigation and fewer side-by-side fields.

MOBILE

Single-column, touch-first layout with stacked fields and full-width primary actions.

Core principle: responsive behaviour is based on content and task needs, not simply device names.

Primary User Flow

01 → 02 → 03 → 04 → 05 → 06 → 07

Discover → Understand → Apply → Review → Submit → Confirm → Track

- Users can move backwards to correct information.
- Confirmation is a distinct stage with a reference number and next steps.
- Save-draft and recovery patterns reduce risk during longer tasks.
- Tracking makes progress visible and actionable.

QA & Testing Strategy

A layered, risk-based testing model was defined for the digital-service platform.

Functional
Core workflows

Integration
APIs & services

Regression
Protect fixes

Performance
Load & stress

Security
Auth & input

Usability
Task clarity

Accessibility
Inclusive access

Compatibility
Browsers & devices

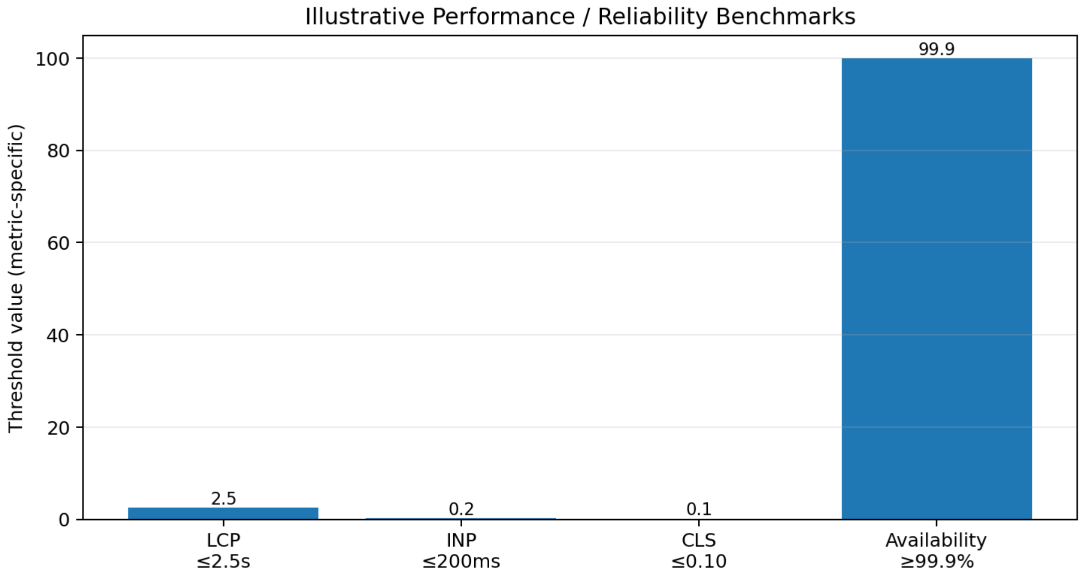
Lifecycle: Requirements → Test Design → Environment → Smoke → Execution → Defects → Regression → Release

Representative Test Coverage

ID	Scenario	Type	Priority
TC-01	Citizen Registration	Functional	P1
TC-02	Login & Session Control	Functional + Security	P0
TC-03	Service Search & Selection	Functional + Usability	P2
TC-04	Online Application Submission	Functional + Integration	P0
TC-05	Input Validation & Boundaries	Functional	P1
TC-06	Document Upload	Functional + Security	P1
TC-07	Application Status Tracking	Functional	P1
TC-08	Role-Based Authorization	Security	P0
TC-09	Notification Integration	Integration	P1
TC-10	Logout & Data Protection	Security	P0

10 detailed scenarios were documented, covering positive, negative, boundary, integration, authorization and security-oriented checks.

Performance Evaluation



CORE WEB VITALS

LCP ≤ 2.5 s • INP ≤ 200 ms • CLS ≤ 0.10 at the 75th percentile.

BACK-END SIGNALS

TTFB, API latency, error rate, throughput and availability.

TEST APPROACH

Baseline, mobile, peak-load, stress, endurance, API and failure tests.

These are benchmark targets from the audit report, not measured production results.

Accessibility & Security

ACCESSIBILITY

Target: WCAG 2.2 Level AA.

Keyboard access • visible focus • semantic structure • labels and errors • contrast • screen readers • zoom/reflow • accessible authentication.

Acceptance: critical citizen-service journeys should be completable with keyboard and remain understandable with a screen reader.

SECURITY

Defense-in-depth approach informed by OWASP Top 10.

Broken access control • injection/XSS • authentication and sessions • cryptographic protection • secure configuration • logging • dependency management.

High-risk findings should be remediated before public release.

RUM / APM

Monitoring & performance evidence

The supplied material documents these standards and evaluation approaches; it does not specify a production implementation stack for the audited platform.

Learning & Expected Outcomes

Design thinking

Translate user needs into task-first information architecture and responsive interface decisions.

QA mindset

Think in requirements, coverage, risk, defects, regression and release quality.

Security awareness

Recognise authorization, input handling, session and data-protection concerns.

Accessibility

Treat inclusive access as a design requirement, not a final-stage check.

Performance

Understand LCP, INP, CLS and service-level indicators.

Documentation

Present technical decisions, evidence, limitations and recommendations clearly.

CONCLUSION

From requirements to design, quality assurance and audit thinking

The internship work connects citizen needs with responsive design, structured testing, accessibility, security and performance evaluation.

References & Evidence

01 Week 1 — Planning & Requirements Analysis for an E-Governance Digital Service Platform.

02 Week 2 — Responsive Web Prototype for Digital Services: Design Documentation.

03 Week 3 — Quality Assurance & Testing Strategy for Digital Services.

04 E-Governance Digital Service Platform — Performance, Accessibility & Security Audit Report.

05 Supplied internship completion presentation used as the visual/layout reference.

Important limitation The audit material concerns a hypothetical platform and does not claim live production measurements or verified real-world vulnerabilities.
